

RUNWAY 27L TOUCH & GO PATTERN PROCEDURE

Pilots are urged to make every attempt possible to reach 1200' MSL before turning crosswind and along Highway 125. Once reaching 1200' MSL, make your power reduction. Please **do not** turn downwind until reaching pattern altitude of 1200' MSL and reducing RPM. Please fly safely and quietly over homes.

If unable to comply due to equipment limitations, please consider using an alternate runway.

Please be a good neighbor—fly safely and quietly over homes!
